*presents ..... a seminar by*

# Davis Vaughan

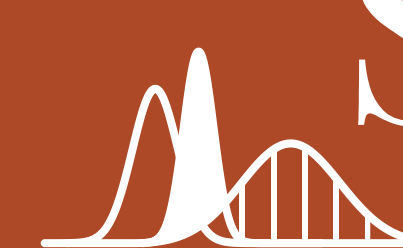

Join us for a talk by **Davis Vaughan**, a **software engineer at Posit**, as he asks the timely question: in the age of AI tools, **is YOUR degree worthless?!** Davis works on Positron, a data science-focused IDE, as well as the R packages in the tidyverse. He will discuss how he and his colleagues use Claude Code and other AI tools to amplify their own skills, rather than replace them.
